

Typical Product Specifications & Properties

D-Tryptophan

CAS Number: : 153-94-6

Specifications	Limits
Insolubility	in chloroform
Melting Point	275-290 c (dec.)
Molecular weight	204.23
Solubility	mg/ml in dmso, 95 ethanol, acetone
Chemical Structure	 <p>The image shows the chemical structure of D-Tryptophan, which consists of an indole ring system attached to a side chain. The side chain includes a methylene group, a chiral center (marked with a wedge bond), and a primary amine group. A carboxylic acid group is also present, with the oxygen atom highlighted in red. The structure is overlaid with a 'parchem' logo and the text 'fine & specialty chemicals'.</p>
