

## Typical Product Specifications & Properties

# N-Isopropylmorpholine

CAS Number: : 1004-14-4

Specifications	Limits
Chemical Structure	 <p>The image shows the chemical structure of N-Isopropylmorpholine, which consists of a six-membered morpholine ring with an oxygen atom at the top and a nitrogen atom at the bottom. The nitrogen atom is substituted with an isopropyl group. Below the structure is the Parchem logo, which includes the word "parchem" in a stylized font and the tagline "fine &amp; specialty chemicals" underneath.</p>
